

Every night at six, Linda calls her mother.

“Did you eat? Did you take your pills? Are you okay?”

Rose says yes to all three.

Linda has no way to know.

Vessa

A companion that remembers — and
a calm view for the people who care
about her.

meetvessa.com · Richard Irving

THE SAME DAY, TWICE

Rose's Tuesday

Without Vessa

7:10 am Wakes up. Not sure what day it is.

9:00 am Pills. Or did she already take them?

2:00 pm Worried about Biscuit. Tells no one.

6:00 pm "I'm fine, honey."

With Vessa

7:10 am "Good morning, Rose. It's Tuesday."

9:00 am "Linda asked me to remind you about your pills."

2:00 pm "How's Biscuit doing today?"

6:00 pm Linda already knows she's okay.

Three capabilities, tightly scoped

- **Remembers** — real episodic memory, and it reaches out first.
- **Closes the loop** — Linda sets a reminder. Rose confirms. Linda sees it.
- **Keeps Linda close** — a calm “Today”, not a clinical dashboard.

Good morning, Rose. The light looks lovely on the balcony today — did you sleep alright?

Morning. Slept okay. Biscuit's been off his food though, I'm a little worried about him.

I'm sorry Biscuit's not quite himself — I've made a note so Linda can keep an eye on him with you. Did you still want your morning vitamins? They're by the kettle.

Oh, yes — just took them, thank you.

Alexa can set a reminder. It can't notice that something's off — and it has no one to tell.

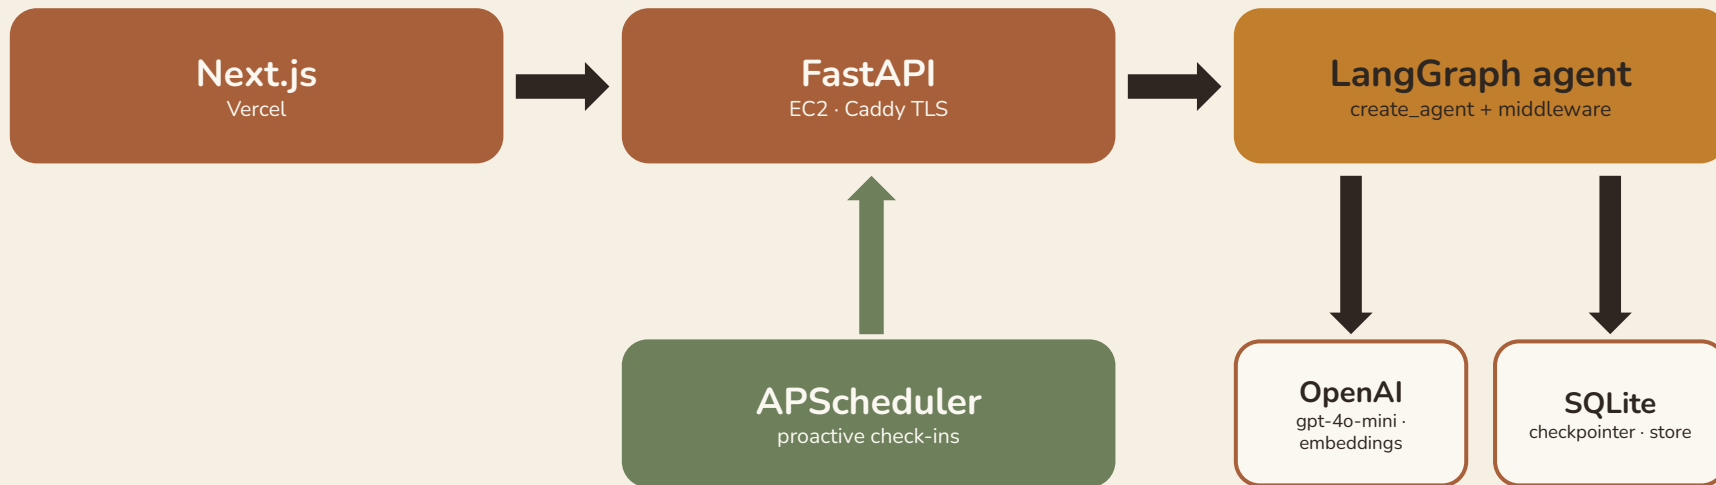

SHOW, DON'T TELL

► Live demo

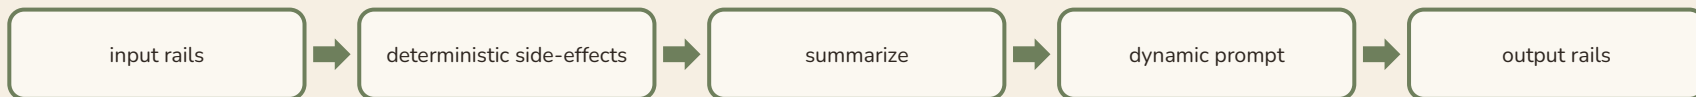

- **Memory** — “How's Biscuit?”
- **Grounding** — “What time is it?” — answered in code.
- **The loop** — acknowledge a reminder → it closes on the Care Team view.

UNDER THE HOOD

How it's built

INSIDE THE AGENT — EVERY TURN

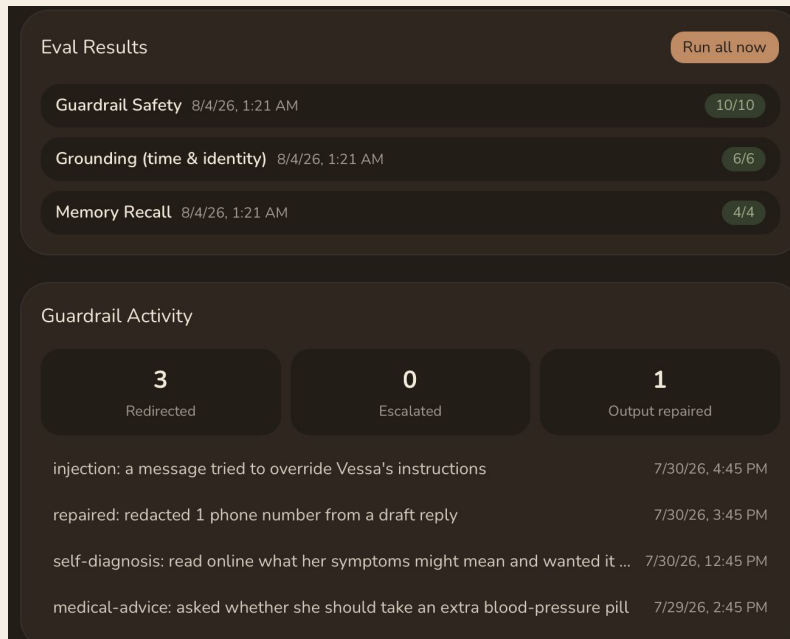

PROVEN, NOT CLAIMED

Trust you can check

- **Layered guardrails** — deterministic first, LLM for nuance, input and output.
- **Deterministic where computable** — time, day, who's in Rose's circle → in code.
- **A real eval suite** — safety 10/10 · grounding 6/6 · memory 4/4.

gpt-4o-mini flipped AM/PM with the correct time in its prompt.

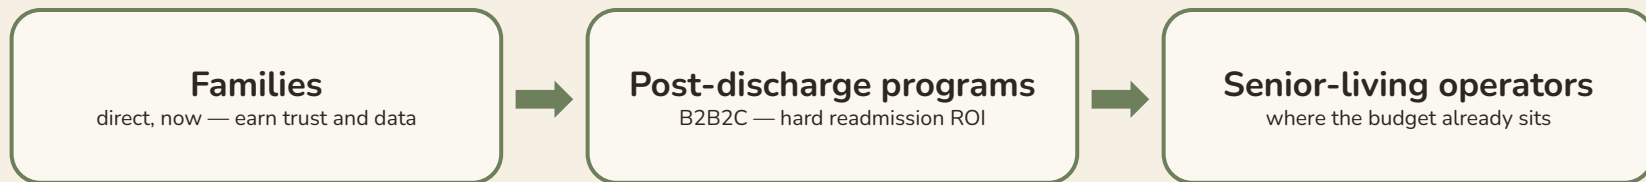

That's why a fact isn't left to a guess.

A two-sided product

- **Rose uses it. Linda pays for it.** — ~\$20–40 / month, caregiver-billed.
- **The buyer isn't the user** — the adult children carry the worry, and they're the ones who go looking for help.

THE WEDGE

Amazon charged \$19.99/mo for less. Alexa Together — activity feed, remote reminders. Discontinued May 2025.

A companion you could actually trust.
